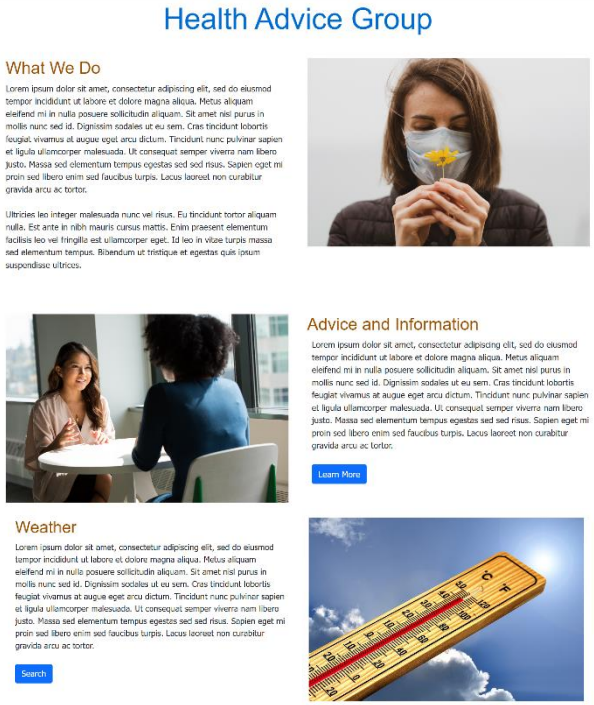
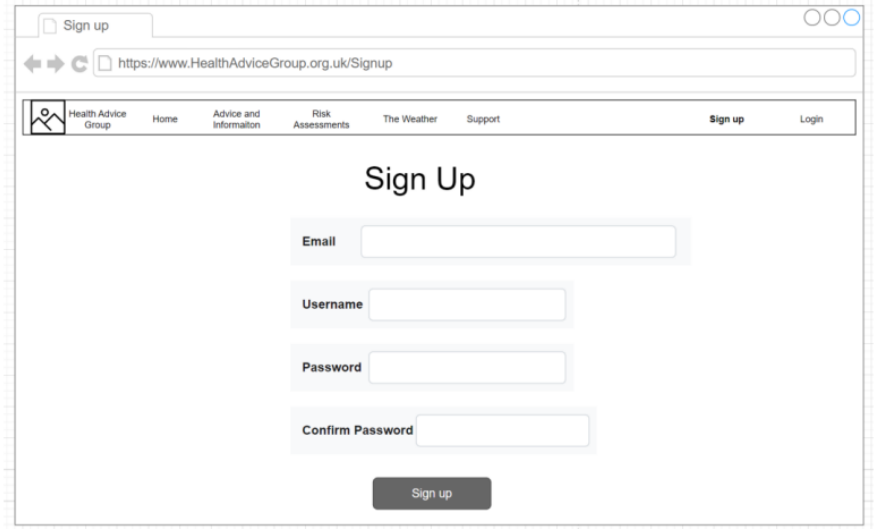
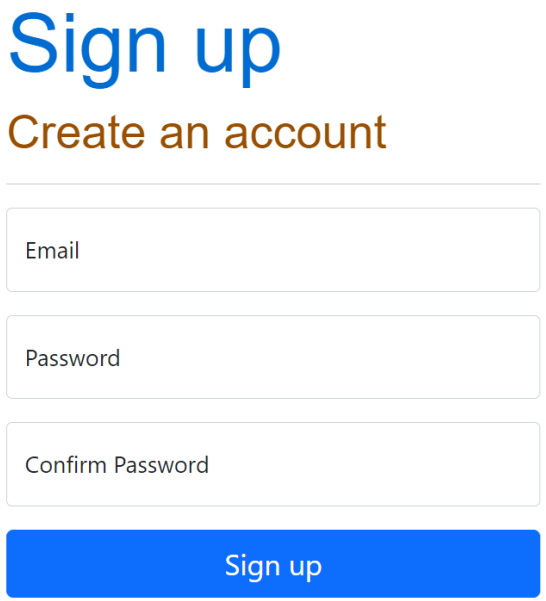
Home Page

Wireframe	Initial Design	Final Design
		


The home page was initially going to be the same as the wireframe, however on most websites they have links to other pages to make them easier to access and give more information to the user. Therefore a section for the advice and information page and another for the weather page was added in the final design. Each of the sections have a description, an image related to the page, and a button that the user can press to be redirected to the page. The Advice and Information page and Weather page were chosen as they are more likely to be used by the user more frequently.

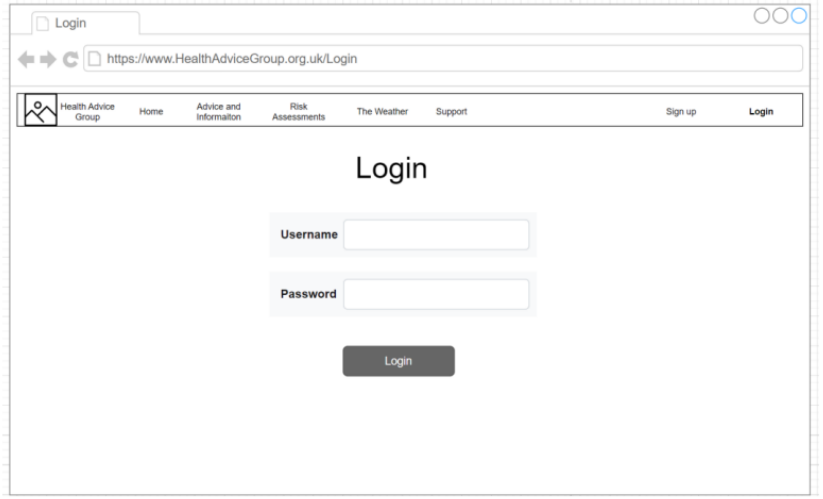
Sign up Page

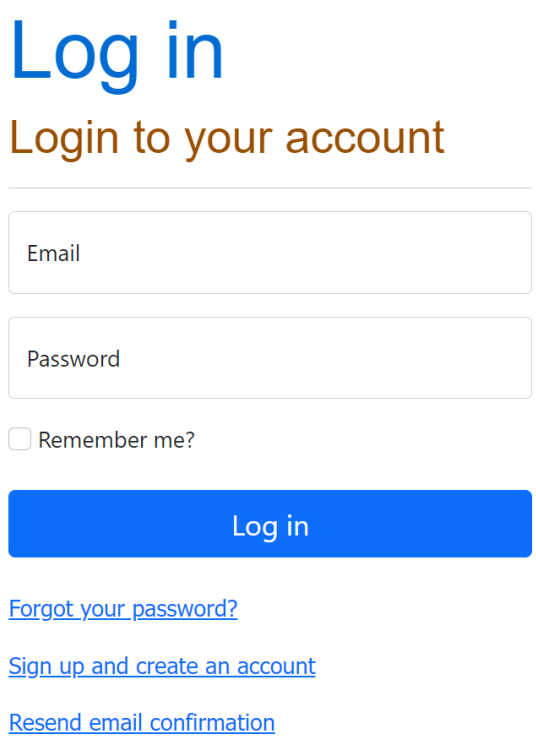
Wireframe	Final Design
	




The sign up page was changed a bit from the wireframe. A small subheading was created to inform the user that an account will be created when you sign up. The username was not added in the final design as I came across errors trying to change the already defined username from email to a new variable. In the end I had to go back to a previous key version.

Login Page

Wireframe	Final Design
	


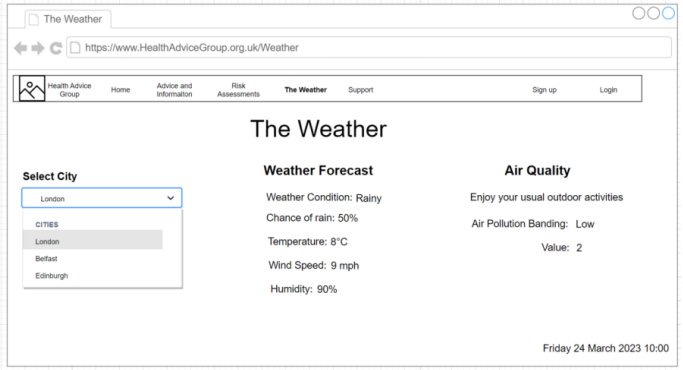


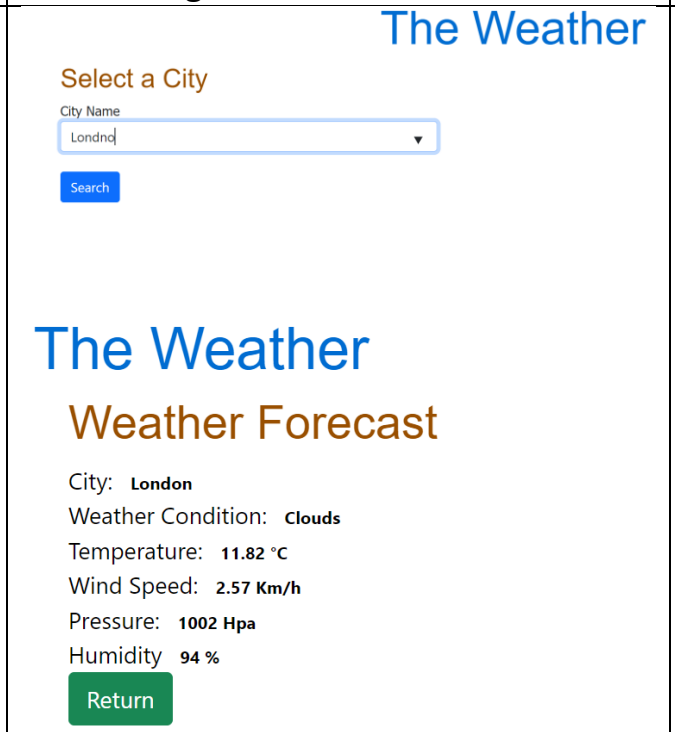
The login page has changed as the email has replaced the username from the wireframe and a remember me check box was added. The login page was improved upon in the final design by the addition of links underneath the login button. There is an option for when the user has forgotten their password and an option to be resent the email confirmation. These are useful and helps users who are unable to access their account so that there is less load for the support team.

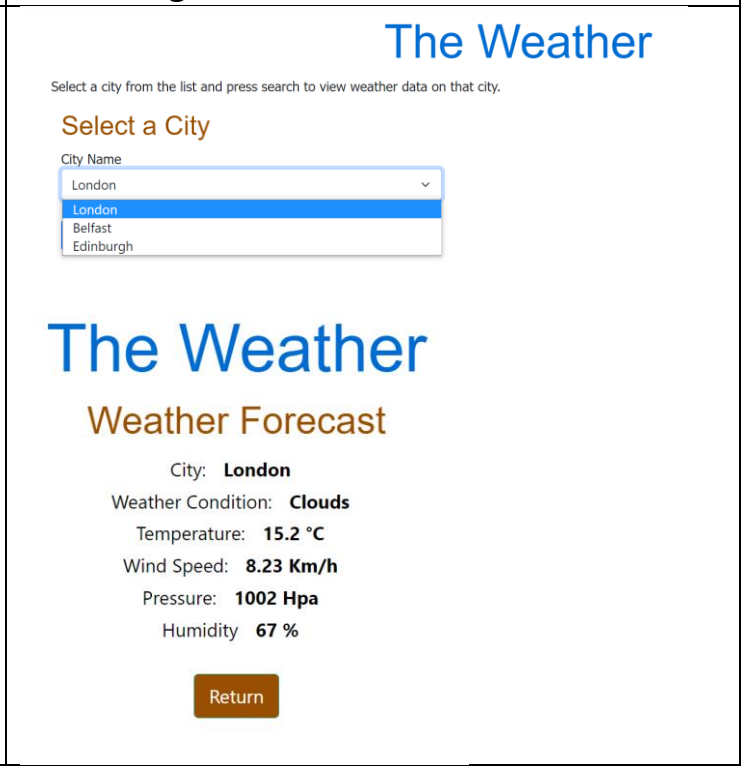
Advice and Information Page

Wireframe	Initial Design	Final Design
N/A		
The advice and information page was made more user-friendly from the initial design. The initial design was not pleasing to the eye as it was a page of hyperlinks and it was easy to accidentally press the link above or below the one intended. Therefore it was replaced with cards in the final design. These cards gave the user more information with an image to visually represent the article and a read more button to take the user to it. They also reduced the problem of accidentally pressing the wrong article as the buttons are within their own card and there is padding between them.

Weather Page

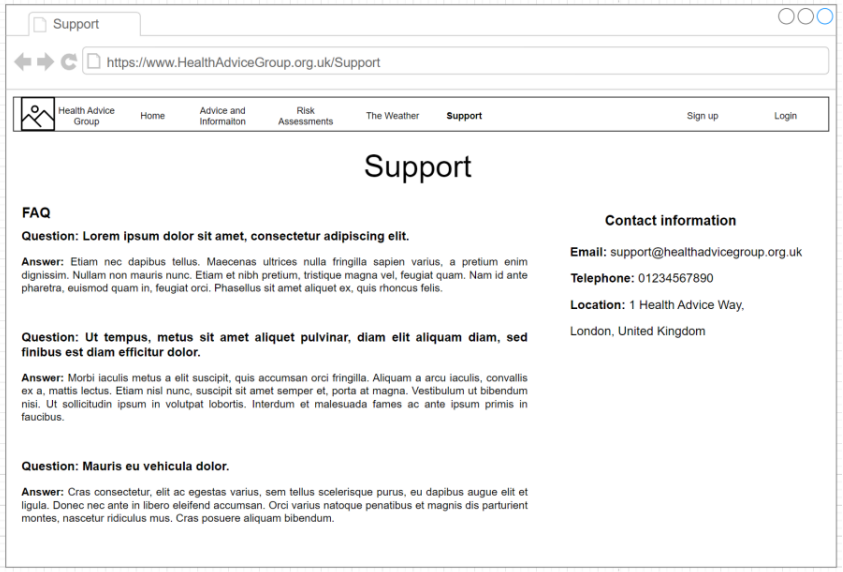
Wireframe	Initial Design	Final Design
		


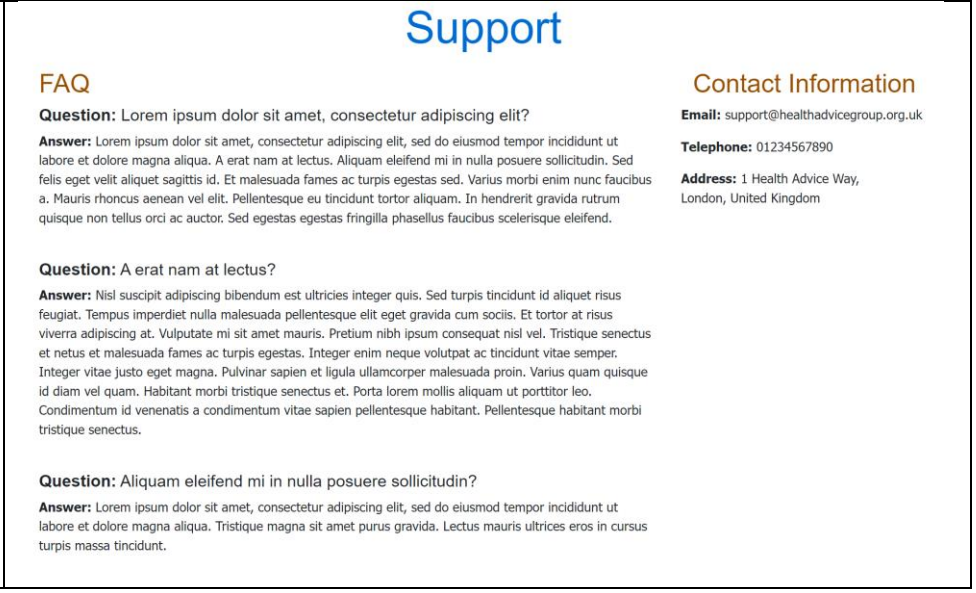




The weather page was changed the most. The search function was separated from the weather forecast as the weather forecast would show no values until a city was selected; as a result they were made on different pages. The search city function was changed in the initial design from the wireframe to allow users more freedom to search cities. However an error occurred when the spelling of a city was incorrect which generated a page of no values. Therefore a select menu was added in the final design, like the wireframe, which lists the cities that users can select from. Only a few options are shown but more can be added. The air quality dashboard was not present in the final design because of the limited time to create the solution. Instead, it could be released as an update to the website at a later date.

Support Page

Wireframe	Final Design
	




The support page stayed true to the wireframe as the final design did not change much from it. The questions were made bigger than the answers and colour was added to the headings to differentiate them. The FAQ could be improved by instead creating accordions for the questions and answers so that it is less overwhelming for the user at first glance.
